

Capture: everything it does

Open **Capture** on your phone (Menu, then Capture), pick the sale and pick your phone. Use a normal browser tab, not a private or incognito one: Capture keeps each lot on the phone until it uploads, and private tabs don't allow that. The camera fills the screen. Here is everything it does.

1 Photos and clips

In Capture, tap the shutter for a photo. Hold it to record a clip of up to 30 seconds, good for a clock that chimes or a toy that runs.

Tap the shutter for a photo. Hold the shutter to record a clip; let go to stop. A clip runs up to 30 seconds. Clips are good for a clock that chimes or a toy that runs.

2 Voice notes

Hold Mic in Capture and say what you know: maker, age, what's wrong with it. The AI draft uses your voice note.

Hold **Mic** and talk: maker, age, condition, what you know about it. Let go to stop. The note is saved with the lot, and the AI draft reads it along with the photos.

3 The shot list

Shoot labels, maker's marks, barcodes and damage. The AI reads them to name the lot. Shot list in Capture brings up the reminder.

Shoot the model or serial label, the barcode, the maker's mark or signature, and any damage. The AI reads them to name the lot. Tap **Shot list** at the top for the reminder; it shows at the start of each session until you tap **Don't show again**.

4 Shooting without signal

No signal in the basement? Keep shooting. Capture saves each lot on the phone and uploads in the background. Keep the page open until the upload bar finishes.

Keep shooting in a basement or a barn. Each lot is saved on the phone when you tap **Next lot**, and uploads in the background when there is signal. Keep the page open until the upload bar finishes. **Done** waits for the uploads before it leaves.

5 Several phones at once

Two people, two phones. Tap Add another phone in Capture and each phone numbers lots from its own block, so nobody doubles a number.

Each phone numbers lots from its own block (Phone 1 takes lots 1 to 500, and so on), so nobody doubles a number. On the "Which phone is this?" screen, tap **Add another phone** for each extra person.

6 The sticky header

Set the location tag, consignor and starting bid once in Capture's header. They carry over to every lot until you change them.

Tap **Header** to set the location tag, consignor and starting bid. They carry over to every lot until you change them.

7 Zoom and checking photos

Tap 1x, 2x or 4x, or pinch, to get close on a mark. Tap a thumbnail to check the photo full screen, then Retake or Delete.

Tap 1x, 2x or 4x, or pinch the screen, to get close on a mark. Tap a thumbnail to see the photo full screen and pinch to check focus. **Retake** puts the next photo in its place; **Delete** removes it.

8 Photos from the library

Already took the photos? Tap + next to the thumbnails in Capture to add them from your phone's library.

Already took the photos with the camera app? Tap + next to the thumbnails and pick them from your phone's library. They are sized down the same way as Capture's own photos.

9 The cover photo

The first photo is the cover in search and the catalog. Shoot the whole item first. You can reorder photos on the lot later.

The first photo of a lot is its cover in search and the catalog, marked **Cover** on the thumbnail. Shoot the whole item first, straight on. You can drag photos into a new order on the lot's page later.

10 Undo last lot

Saved a lot by mistake? Undo last lot in Capture removes it and its photos, and the next lot gets its number back.

Saved a lot by mistake? Tap **Undo last lot** and confirm. The lot and its photos are removed, and the next lot gets its number back.

After Capture

Lots land on the sale as drafts. Read each one on **Review** before you approve it. See Cataloging: photos, phone capture and AI drafting.
